Conventional nut-driver

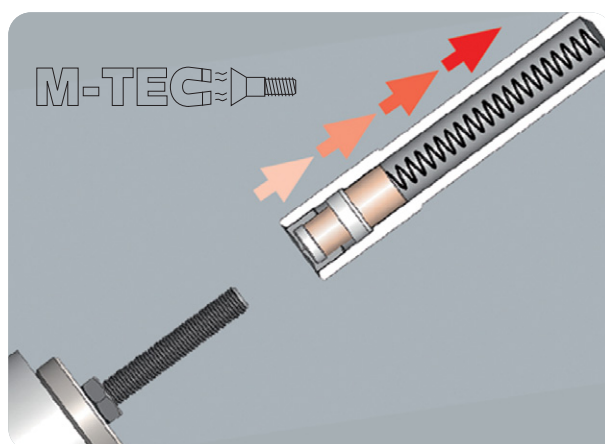

## Conventional nut-drivers are useless in two situations:

- 1) when the nut is sitting on a long threaded bolt and
- 2) when the screw or nut has to be operated in a difficult to reach space.

## Felo M-Tec nut-drivers solve these problems with ease:

- A spring-loaded magnet holds nut or screw and allows easy and safe placement in difficult spaces.

- On threaded bolts the magnet is pushed deep into the socket tube.

Felo M-Tec nut-drivers are available as screwdrivers, T-handles and sockets for ratchets and power-tools.
